Full-stack developer (AMIGODEV) studying Mechanical Engineering at Ekiti State University. I build web applications end to end — interface, database design, authentication and permissions, payments and deployment — for schools, businesses and communities in Nigeria, and keep them running after launch. Steering toward DevOps and infrastructure.

PROJECTS & CLIENT WORK

Amigo World · own product, social platform — Invite-only beta · in development

React 19 · TypeScript · PostgreSQL (Neon) · Cloudflare R2 · Web Push · Vercel · GitHub Actions

- Rebuilt my Firebase social app as a typed React application on PostgreSQL: posts, profiles, 24-hour Moments, live community events (Worlds) and notifications, with the old version kept as a rollback path.
- End-to-end encrypted one-to-one messages using Matrix cryptography compiled to WebAssembly; the server stores only ciphertext.
- Visibility, blocking and rate limits enforced in the database; private media via signed links; 39 migrations, 41 test scripts and 8 CI workflows with live production checks.

Kandy's Treats · client: kitchen in Ado-Ekiti — In production · kandystreats.com.ng

JavaScript · Supabase · PostgreSQL · Row Level Security · Edge Functions · Paystack

- Built the customer storefront, accounts, checkout, wallet and Paystack payments, plus an admin console for orders, menu, inventory, finance, staff and support.
- Migrated the core data and logic from Firebase to Supabase while the business kept trading.
- Prices recomputed on the server inside the order transaction; 174 RLS policies across 84 migrations; 7 Edge Functions.

Markaz il Ginna · client: Islamic school — Live · rebuild in phases

Next.js · TypeScript · PostgreSQL (Neon) · Drizzle ORM · Neon Auth · argon2id · Vitest

- Bilingual English and Arabic school records system with full right-to-left layouts: students, staff, results and a family portal.
- Separate staff and student sign-in with roles and permissions; six delivery phases shipped; 180+ tests on real PostgreSQL.

EKSU Sports Hub · own product, university sport — In active development

Next.js · TypeScript · Supabase · PostgreSQL · Row Level Security · Realtime · pgTAP

- Live scores, fixtures and tables for Ekiti State University sport: public site, admin dashboard and match operator console (62 routes).
- No table writable from the browser; 14 pgTAP test suites over 21 migrations; a server-synced match clock and retry-safe operator actions.

BIA JUPEB · client — Live · biajupeb.com.ng

Astro · TypeScript · GSAP · Playwright · axe-core

- Redesigned an admission centre's 11-page site (launched Oct 2026): fees, timetables and guides, all legacy URLs redirected, accessibility test suite.

MAVERICK · client — Preview · Nov 2026

Next.js 16 · React 19 · Tailwind 4 · GSAP · sharp

- Online store for a menswear brand with bag, checkout and WhatsApp ordering; script that cuts garments out of studio photos; end-to-end tests.

HAQSLAM · client: Haqiqat-s-Salam Society of Nigeria · Live — mosque and community site (Next.js) with calculated prayer times and a page-by-page library of the society's books.

Client websites: God's Voice Family Health (2025) · Akmazoo (2026) · Mubocare Surrogacy (2026) · JUVIC Global Concept (2026). Full case studies at amigodev.com.ng/projects.

SKILLS

Frontend	HTML, CSS, JavaScript, TypeScript, React, Next.js, Astro, Tailwind CSS, accessibility, right-to-left layouts
Backend & data	PostgreSQL, Supabase, Firebase, Drizzle ORM, auth, RBAC, Row Level Security, real-time, Paystack
Deployment	Git, GitHub Actions, Vercel, domains and DNS, environments, migrations, Cloudflare R2
Quality	pgTAP, Vitest, Playwright, axe-core, ESLint, Node test runner

EDUCATION

B.Eng. Mechanical Engineering · expected 2028
Ekiti State University, Ado-Ekiti

LANGUAGES

English (working language)
Learning Spanish, French and Arabic (basic)
